

MOHAWK TEMPACOAL™ II —Coal Stove

Manufacturer's Comment

Mohawk is ushering in the '80s with a brand new coal heater—the Tempcoal II. Many homeowners feel much more comfortable if they have a number of fuel options at hand. The Tempcoal II does that, because it also burns chunk wood, peat and charcoal. One of the features that we feel sets the Tempcoal II apart from other coal stoves is its cast iron grate. This three section rocking-finger type grate shakes the ashes and clinkers down easily.

Another advantage, particularly to those who like to see the cheery glow of the fire, is that we have glass windows for easy viewing. The Tempcoal II loads easily from the top and holds up to 40 pounds of coal—easily enough for a 14 hour continuous burn. The firebox is fully refractory lined and, most importantly, *designed specifically to burn coal*. Slide gates easily adjust to control supply of secondary and primary air.

Ash removal is effortless. Simply remove the ash drawer. No poking around or scooping in corners is necessary. The large ash door has a positive seal latch. Tempcoal II is built of

rugged plate steel and the finest materials available—and it is sensibly priced. The 2 speed 115V 60 CY blower is optional, as is our attractive decorator kit.

All Mohawk Stoves are tested by UL or tested by independent laboratories in accordance with UL Standard 1482. Write for information and details on the new smaller wood/coal heater.

Specifications

Style:	Top-loading coal/wood stove
H/W/D:	34 $\frac{3}{4}$ x 20 x 20 in.
Weight:	300 lbs approx.
Rated BTU/hr.:	60,000
Flue Pipe:	6 in. dia.
Ash Door:	6 $\frac{1}{4}$ h. x 13 in. w.
Flue Height:	27 $\frac{1}{2}$ in.
Fuel Capacity:	35-40 lbs.
Finish:	Matte black
Materials:	$\frac{1}{4}$ in. plate steel, refractory lined firebox, glass windows, cast-iron 3-section rocking grate
Option:	2-speed 115 V. 60-cycle blower
Adjustments:	Flue height can be reduced 2 $\frac{1}{2}$ in. by removing legs or installing new fire-place flue adaptor
