Legend:

- 0 = OFF 1 = ON** Shown in order from DIP switch 1 to 8.
- DIPSWITCH 1, 2 and 3 = Ignition Feed Time Offset Adjustment for US and Europe (quantity of pellets augured into the burn pot on start-up)**

DIPSWITCH 1,2,3	Offset time 60Hz	Euro-50Hz
on, on, on (111)	+85 seconds	+102 seconds
on, on, off (110)	+64 seconds	+77 seconds
on, off, on (101)	+43 seconds	+51 seconds
on, off, off (100)	+21 seconds	+26 seconds
off, off, off (000)	+0 seconds	+0 seconds
off, off, on (001)	-21 seconds	-26 seconds
off, on, off (010)	-43 seconds	-51 seconds
off, on, on (011)	-64 seconds	-77 seconds
- DIPSWITCH 4 = Power failure shutdown when using UPS/battery back-up 0 = Quick Shut Down 1 = Continue Operation**
Note: Power failure shutdown is available on boards: 3-20-05886E, 3-20-05887B, 3-20-05888C, 3-20-05892F, 3-20-06142E, 3-20-06143D, or newer
- DIPSWITCH 5 = ESP identification: Red vs. Black 0 = Black 1 = Red (to be "OFF" with any color other than RED)**
- DIPSWITCH 6, Boilers = When using Atmospheric Kit, or high altitude installation 1 = ON should adjusted**
DIPSWITCH 6, Pellet Stoves and Inserts = Room sensor differential 1 = ON reduces the differential by 1 degree F (Recommended)
- DIPSWITCH 7,8 = Set the MAX ESP temperature for specific models using the Dipswitch Reference Chart.**

Notes

1. Always refer to the owner's manual.
2. Ensure all Dipswitch settings are correct for the unit being installed or board being replaced.
3. Depending on stove configuration (such as Rev of pusher arm, RPM of feed motor, or size of gears in chain drives) ignition feed time may need adjusted.

Adjustment: Run the stove or insert through normal ignition and allow stove to cool. Without disturbing the burn-pot, start a new ignition cycle.

Important: Normal re-ignition is required to ensure filling of burn-pot with pellets and ash is consistent.

- If there is excessive smoke within the first 6 to 10 minutes, the ignition feed may need reduced.
- If there is no smoke and takes longer than 10 minutes for ignition, the ignition feed may need increased.
- Use Dipswitch 1, 2 and 3 to adjust ignition feed.
- Always take note of existing setting before increasing or decreasing ignition feed.

4. Fin Igniters: Initial feed should allow pellets to cover the holes above the igniter.
5. Excessive pellets(over feeding) cause extra smoke during ignition.
6. Different pellets may change the amount of smoke seen within the stove or insert during ignition.

Control Board Part #	Where Used	Revision / Release Date
3-20-05888D	PF100, BA100, BIO120, PF120	July 2013

Dipswitch 1,2,3

on,on,on = program +85 sec.
on,on,off = program +64 sec.
on,off,on = program +43 sec.
on,off,off = program +21 sec.
off,off,on = program default
off,off,off = program -21 sec.
off,on,off = program -43 sec.
off,on,on = program -64 sec.

NOTE: A connected DDM (Diagnostic Display Monitor) on power up will show an OFF as 0, and an ON as 1.

Dipswitch # 1,2,3 control the ignition cycle "charge" (quantity of pellets angured into the burn pot on startup) *
Dipswitch # 4 factory set OFF for power failure shutdown with in line (short term battery back-up, UPS) *
Dipswitch # 5 is for ESP type. This switch will need to be OFF with any ESP other than RED.
Dipswitch # 6 is for Room Sensor Differential. "ON" reduces the Diff. by 1 deg. F.
Dipswitch # 6 is for BOLLERS. "ON" when using atmopheric kit or high altitude installation. *
Dipswitch # 7,8 set the MAX ESP temperature for specific models. (Set as shown above.)
(NOTE: Be sure that all of these switch settings are set for the unit in which they are being installed) * see owners manual
