

The Heat Commander is the offspring of our winning wood stove design at an international automation challenge. Indeed, it is the very first wood furnace on the market to offer *Dual Fire*® technology with a two-stage electronic combustion control. Find peace of mind with a self-regulated combustion that allows easy ignition. Its automated air supply and flame adjustment systems synchronize with your thermostat to offer additional safety, optimize comfort and reduce emissions with minimal maintenance.

This well-thought-out central heating system surpasses all others in our line-up, not only with its ease of use and intuitive air distribution plenum, but also with its EPA emissions rating of 0.095 lb/mm BTU. Its 310,000 BTU input capacity makes it the ideal central wood-heat system for homes up to 2,500 sq. ft.

Experience heating like never before with the Heat Commander!

Included: blower, thermostat, hot air plenum, combustion-state indicator light, automated combustion control, ash lip, ash drawer, poker and scraper.

- Intuitive start mode for fast and clean ignition
- Optimized combustion for low creosote formation
- Uninterrupted heat with on-demand boost based on thermostatic demand
- Among the most efficient systems on the market based on distributed energy
- Among the lowest burn rates on the market (firewood savings)
- Among the highest overall thermal power on the market
- North-South and East-West loading configurations with logs up to 21" in length
- Combustion time up to 10 hours
- Proudly made in Canada
- Limited lifetime warranty

Options: Air filter with support (AC01390 or AC01391); return air duct with filter (AC01392).
