Should you decide that a masonry heater is indeed the best choice for your home and your family, you can look forward to many years of safe, elegant, and efficient heating.

About the Masonry Heater Association

The Masonry Heater Association of North America is a non-profit organization dedicated to serving the interests of the masonry heating industry and its clients. Founded in 1987, MHA is an association of builders, manufacturers and retailers of masonry heaters.

Masonry Heater Builders learn their trade from each other, from the "old country" heater masons and through MHA-sponsored workshops and seminars.

In 1998, the MHA established a certification program for masonry heater builders. To earn their certification, each craftsman is required to demonstrate a working knowledge of masonry work, masonry heater design and construction, and relevant housing and fuel-burning regulations. MHA-approved credentials are required from each craftsman, along with verifiable documentation of at least three masonry heater construction projects they have completed within the past five years. In addition, each craftsman must achieve a passing score on the MHA certification exam.

Available on the MHA Website -

THE MHA HEATER PLAN PORTFOLIO

The Masonry Heater Association has designed, built and tested five masonry heater plans which are now available for purchase.

The portfolio includes five sets of detailed plans for the:

- Finnish Contraflow (Small room heater 24" x 36")
- Kakelugn (Swedish Heater)
- Blacksburg Grundofen (Modified)
- Medium Size Corner Finnish Heater
- Soapstone Heater
- (Materials list for each)

Damper Options, Clean Out Options, Outside Air Options, Options to Finish the Top (above capping slab)
